

WHAT IS CLAIMED IS:

1. A display apparatus comprising:

a panel substrate provided with light emitting devices and driving electrodes for driving said light emitting devices, said light emitting devices and said driving electrodes forming a light emitting region and an electrode region; and

a sealing substrate adhered to said panel substrate through a sealing resin; wherein

said sealing substrate is provided with a relief portion for said sealing resin at its portion opposed to the outside of said light emitting region in the condition of being adhered to said panel substrate.

2. A display apparatus as set forth in claim 1, wherein said relief portion for said sealing resin is comprised of a groove.

3. A display apparatus as set forth in claim 1, wherein said relief portion for said sealing resin is comprised of a plurality of holes.

4. A display apparatus as set forth in claim 1, wherein said relief portion for said sealing resin is comprised of a rough surface formed in a surface of said sealing substrate.

5. A method of manufacturing a display apparatus

comprising a panel substrate provided with light emitting devices and driving electrodes for driving said light emitting devices, said light emitting devices and said driving electrodes forming a light emitting region and an electrode region, and a sealing substrate adhered to said panel substrate through a sealing resin, said method comprising the step of:

providing said sealing substrate with a relief portion for said sealing resin at that portion of said sealing substrate which is opposed to the outside of said light emitting region in the condition where said sealing substrate is adhered to said panel substrate.

6. A method of manufacturing a display apparatus as set forth in claim 5, wherein said relief portion for said sealing resin is comprised of a groove.

7. A method of manufacturing a display apparatus as set forth in claim 5, wherein said relief portion for said sealing resin is comprised of a plurality of holes.

8. A method of manufacturing a display apparatus as set forth in claim 5, wherein said relief portion for said sealing resin is formed by roughening a surface of said sealing substrate.
